ASAHI FLEX

ASAHI FLEX

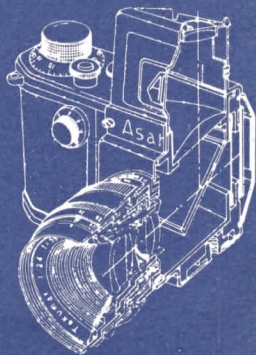

Asahiflex Model II B is now on the market, with "quick returning mirror" completely eliminating the worst fault of the single lens reflex camera, viz. preventing the image from vanishing when the shutter is pressed.

While the old type single lens reflex cameras had the trouble of the mirror image vanishing when shutter was pressed, with the newly invented "quick returning mirror system" connecting shutter and mirror, an epoch-making improvement has been completed, thus removing entirely the above mentioned trouble; immediately after the shutter action, the mirror is set back to its original position automatically and instantly.

In addition to the above characteristics, the Model II A has a newly designed Takumar f:2.4 58 mm. lens of five elements, the first in the world of its type, as its standard lens, which continues our efforts towards constant improvement.

Asahiflex II A, with a slow speed shutter in addition to the above mentioned "quick return system", is foremost among cameras of all other types with its correct exposure timing.

High Precision Takumar Interchangeable Lenses Completed
